

Sample Project Documentation – EduGenie

Date: 30 September 2026 **Team ID:** 6ab3e57da238dc999eb3d44d **Project Name:** EduGenie – AI-Powered Educational Assistant

Maximum Marks: 3 Marks

Project Description

EduGenie is an AI-powered educational assistant designed for self-learners. It combines five study workflows—Q&A, beginner-friendly explanations, summarization, quiz generation and learning-path recommendations—inside one lightweight FastAPI web application. The AI layer is centralized in AIService, which can call a configured Gemini model and can provide demo responses when a live API key is unavailable.

Scenario 1 – Understanding a difficult concept

A learner enters a topic such as photosynthesis and chooses Explain. EduGenie sends a focused beginner prompt through the explanation module and displays a simplified explanation with an analogy and key takeaways.

Scenario 2 – Revising notes

A learner pastes a long passage and selects Summarize. The summary module asks the AI service to preserve the main ideas in plain language, helping the learner review more quickly.

Scenario 3 – Active practice

A learner supplies a topic and chooses Quiz. EduGenie asks the model for exactly three MCQs with four options each, cleans any Markdown fences, parses the JSON and returns the structured quiz to the frontend.

Scenario 4 – Planning what to learn next

A learner enters a topic such as SQL and chooses Learning Path. The learning-path module requests a progression from beginner to advanced with key topics, practice ideas and resource types.

Responsible Use

AI-generated educational content should be checked against trustworthy sources. The application documentation advises users not to submit sensitive or confidential information and keeps API keys outside source code.
